Developmental Biology - MIT

OpenCourseWare Biological development, the progressive changes in size, shape, and function during the life of an organism by which its genetic potentials (genotype) are translated into functioning mature systems (phenotype). Most modern philosophical outlooks would consider that development of some kind or other characterizes all things, in both the physical and biological worlds. Biological development | Britannica Biological development - Biological development - Types of development: In the entire realm of organisms, many different modes of

development are found, the most important categories of which can be discussed as pairs of contrasting types. Development may amount to no more than a quantitative change (usually an increase) in a system that remains essentially unaltered. Biological development - Types of development |
