action to determine what rate of colony harvesting by honey hunters is sustainable. This requires

information on the demography of hunted populations, particularly the intrinsic growth rates and the rates

of harvest. Conservation of Asian honey bees |

SpringerLink Deforestation, loss of nest sites, pathogens, and increased pesticide use have contributed to a steady decline of the *Apis cerana* population.

Furthermore, the replacement of *Apis cerana* management by *Apis mellifera* management in many areas affects the native flora in addition to the bee

population. Asian honey bee - *Apis cerana* Asian honey bees (*Apis cerana*) can be easily confused with common European honey bees (*Apis mellifera*), and some other bees and insects. The following information can assist identification. Asian honey bees are widespread in areas north of Tully and reporting and control in these areas is not

compulsory. Identifying Asian honey
