Boston Scientific is transforming lives with ground-breaking technologies to address irregular heart rhythms, heart failure and sudden cardiac arrest, and is collaborating with healthcare professionals to develop the most advanced and least-invasive therapies to further improve patients' lives and reduce costs. right atrium performs both sensing and pacing function. In the RV, the tip electrode functions as the cathode for pacing and sensing functions. The presence of a “shock” conductor (termed shock coil) on the RV lead in the RV distinguishes a defibrillation system from a conventional pacemaking system. Background— Right ventricular apical (RVA) pacing creates abnormal left ventricular contraction, hypertrophy, and reduced pump function. The adverse effects of ventricular desynchronization may explain the association of RVA pacing with an increased risk of heart failure hospitalization (HFH) in clinical trials. The clinical impact of slow ventricular tachycardia (VT), occurring in patients carrying implantable cardiac defibrillators (ICD), is still under debate. From the UMBRELLA registry (multicenter, observational, and prospective study on patients with ICD), 659 episodes of slow VT were observed in 97 patients. Untreated slow VT (n = 93) had longer duration (23.7 min, CI95%: 10-39), compared ... The clinical impact of untreated slow ventricular ...
