... A key component of electromagnetic anechoic chambers is the material used to cover all interior surface of the chamber. The design of a chamber hinges on the proper selection and placement of the absorber on the various surfaces of the chamber, including the back wall, the side-wall specular zones, the floor, and corners of the chamber.

Design ... anechoic chamber becomes a viable solution. The anechoic chamber provides an environment free of echo or other radiated signals to reduce the effects of these undesirable signals. This article covers applications where an antenna is radiating or receiving a given signal, and its performance as a function of its Precision Antenna Measurement Guide A key design item for an anechoic chamber is the RF absorber. The absorber treatment must be such that the reflected energy has a small or negligible effect on the measured data. A typical RF absorber is a lossy material shaped to allow for incoming electromagnetic waves to penetrate with minimal reflections. Basic Rules for Anechoic
