with most radio vendors at home and abroad, providing  
great compatibility. With its user friendly interface and  
seamless integration, our vEPC can be deployed in a  
varied number of situations to better meet your needs:  
M2M, Private LTE networks, Fixed Wireless, and  
Evolution to 5G. Evolved Packet Core, Virtual EPC, 4G  
network solution Evolved Packet Core (EPC) is a  
framework for providing converged voice and data on a  
4G Long-Term Evolution ( LTE) network. 2G and 3G  
network architectures process and switch voice and  
data through two separate sub-domains: circuit-  
switched ( CS) for voice and packet-switched ( PS) for  
data. Evolved Packet Core unifies voice and data on an  
Internet Protocol ( IP ) service architecture and voice is

treated as just another IP application. What is Evolved Packet Core (EPC) ? - Definition from ... YateUCN (Unified Core Network) is our solution that provides maximum functionality for all the other Evolved Packet Core nodes in a single server: Our solution comprises the MME, SGW, PGW, and PCEF nodes. It is very flexible and can communicate with HSS via 2G/3G protocols or 4G protocols. This is the most complex product we developed. LTE EPC is the Core Network of LTE networks. The EPC is a packet-only core network. It does not have a circuit-switched domain, which is traditionally used for phone calls and SMS. Support for Voice services in EPC. 3GPP specified two solutions for voice: IMS: A solution for IMS Voice over IP was
