mongo Shell Quick Reference — MongoDB Manual

Overview. You will learn: how to build an app to buffer, intersect, and preform distance calculations with the geometry engine. Applications can use the geometry engine and the geometry service to perform sophisticated spatial operations such as buffering, projecting, calculating length and area, and determining the spatial relationship between two or more geometries.

#4: Circles. Rules. A circle is equal to 360 degrees. The circumference is the length around a circle (i.e., the perimeter of a circle).; The radius (plural: radii) is the length from the middle of a circle to any point on the edge of a circle.; The diameter is the length of any straight line cutting a circle in half (and passing

through the center point).

Buffer and intersect geometry | ArcGIS API for JavaScript 4.18

A bicycle frame is the main component of a bicycle, onto which wheels and other components are fitted. The modern and most common frame design for an upright bicycle is based on the safety bicycle, and consists of two triangles: a main triangle and a paired rear triangle. This is known as the diamond frame. Frames are required to be strong, stiff and light, which they do by combining different
